

# Backend Technical Test

Backend API development task

As a user I want to be able to view a list of ideas on VeryCool

<https://verycoolapp.com/>

- Build a REST / GraphQL API to list the ideas

As a user I want to be able to add a new Idea

- Build a REST / GraphQL API to add a new idea

## Questions

1. What technologies would you choose?
2. What database(s) would you choose?
3. What considerations would you make when building the API?
4. How would you handle security of the API?
5. Write the Slack message you would send to the frontend developer explaining how to use the API

## Frontend Design
